

METERING MANHOLE

Part of a total flow monitoring system that may be supplied with any type of fiberglass flume or flow measurement weir integral to the system. Our metering manholes are shipped, ready to install, and include a fiberglass ladder, floor and two-inch NPT coupling.

The strong one-piece design assures that the manhole will never leak, eliminating infiltration at the site and enabling the manhole to serve a long and maintenance-free life. Fiberglass manholes also weigh a fraction of the weight of pre-cast manholes, allowing for quick and easy installation with less equipment and labor.

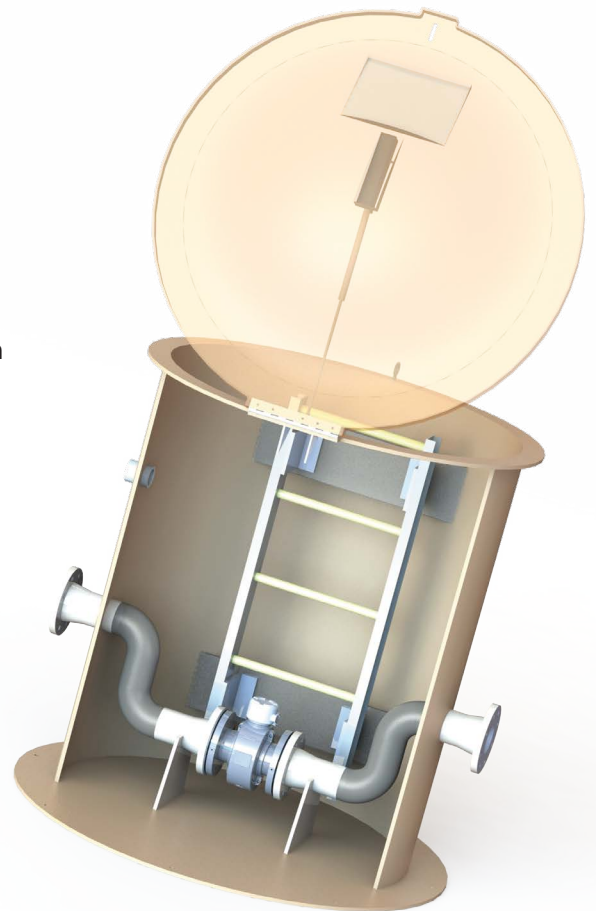

Our manholes are offered in two standard sizes: 48 inch or 60 inch diameter. We are also able to design and fabricate a custom sized manhole to meet your specifications if these diameters do not. Our standard sized manholes can be configured with either a hinged fiberglass cover or H-20 adapter for use with a manhole frame and cover.

In traffic areas, VPC offers a lightweight, traffic-rate fiberglass manhole frame and cover. For a complete solution to your project, this frame and cover can be packaged with a flow meter.

FEATURES:

Lightweight
Maintenance-free
Strong, durable design
One-Piece Construction
Manufactured in any diameter or depth
Leakproof

H-20 traffic rate
Fully assembled
Easy to install
Variety of cover options
